TX5S Clipperton Island –update

Camp Site Design:

Detailed planning is underway. Our current plan consists of two operating camps: CW/Digital/Satellite/EME and SSB/Digital. The camps will be separated by about 500 meters, with CW located at the main campsite and SSB being the distant camp. The combination of distance, bandpass filters, horizontal and vertically polarized antennas at both camps will enable simultaneous operation on the same band. WiFi networking will link the camps. The main encampment consists of ten sleeping tents (two people per tent) the CW tent, kitchen / dining tent and a HQ/networking tent. The power grid will consist of six Generac GP6500 generators. Five units will be on-line 24X7 and one spare.

TX5S Team:

The nineteen person team consists of sixteen radio operators, one scientist each from the University of French Polynesia and the University of Orleans, and one environmentalist from the Association la Passion-Clipperton (France). The radio operators are each experienced DXpedition operators and/or contest operators.

Internet Availability:

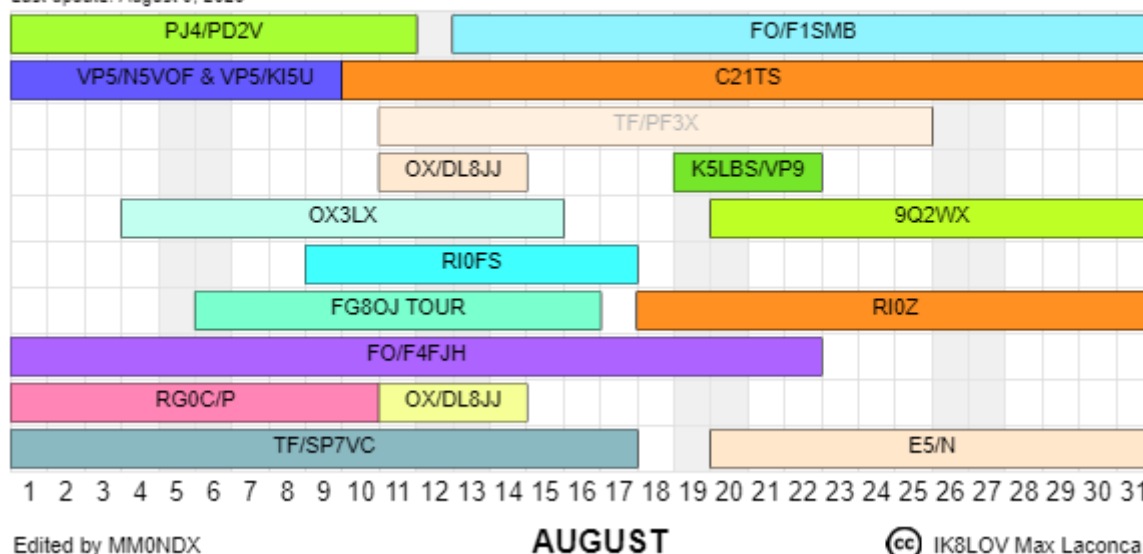

Confirmed (in writing) from Space X, Clipperton is within the Starlink footprint. We will have at least one Starlink terminal online 24/7. Logs will be uploaded to M0URX.com at least once per day. <https://www.dx-world.net/tx5s-clipperton-island/>
